PROJECTS

University of Wisconsin Madison *Madison, WI*
Causal Inference and Machine Learning Project Fall 2022

Synthesized various advancements and implemented tests to experimentally demonstrate how machine learning methods can uncover causal relationships in synthetic and real-world data. Write-up Link. Github Link.

Erdös Institute *Ohio State University*
Data Science and ML Bootcamp / Project Fall 2022

Developed and tested various machine learning models including random forests and gradient boosting to reduce bias to predict copayment information based on patient history and drug formulary information with ∼90% accuracy. Github link Project presentation and code base can be found at this page.

Erdös Institute *Ohio State University*
Data Science and ML Bootcamp / Project Summer 2022

For the final project, worked with the "What's Cooking?" dataset from Kaggle. Used dimensionality reduction and clustering analyses to determine similarity between cuisines based on their ingredients.We worked on Random Forest, Linear SVC, and other classification models and achieved an accuracy of $\sim 80\%$. Project presentation and code base can be found at this page.
